Prerequisite					
Instructor			(Course Webpage)		
* Description	SPSS				
* Description	This is an introductory course on language testing. It aims to provide students with essential principles in the field of language testing, specifically in second or foreign language testing. Issues relating to validity, reliability, test construction, administration, scoring and evaluation are addressed. In addition, theories and practices on testing reading, writing, listening, speaking and overall language ability are discussed. Basic measuring procedures for test construction and evaluation would be introduced. Real or simulated test data are to be used for class instruction and students exercises, sessions for software application are integrated with some specific topics. Through this course, students are expected to well understand the essential principles of language testing, could calculate some basic test statistics using SPSS or other software.
